SELECTED GROUNDWATER LEVEL RECORDS  
FROM OBSERVATION WELLS IN  
QUEEN ANNE'S COUNTY, MARYLAND

Queen Anne's County Department of Public Works

August 2024

## SUMMARY

This report presents water-level data for 26 observation wells in Queen Anne's County. Water levels are tabulated from July 2023 through June 2024. Water-level hydrographs are shown for the entire period of record at each site. Data, collected by the Maryland Geological Survey (MGS), are stored in the National Water Information System (Groundwater Site Inventory database), maintained by the U.S. Geological Survey. Current and historical groundwater data may be obtained from the U.S. Geological Survey website at <http://waterdata.usgs.gov/nwis/gw> or through an interactive map on the MGS website at [http://www.mgs.md.gov/groundwater/water\\_level\\_mapper.html](http://www.mgs.md.gov/groundwater/water_level_mapper.html).

**Surficial (Columbia) aquifer.** Water levels were measured in two wells in the unconfined surficial aquifer (at Barclay and Grasonville). In the past year, water levels fluctuated seasonally up to approximately 6 feet. Current water levels range from 68.69 ft above sea level at Barclay (QA Cg 69) to 13.60 ft above sea level at Grasonville (QA Ec 1). Water-levels at Barclay (QA Cg 69) and Grasonville (QA Ec 1) exhibit a generally flat trend.

**Aquia aquifer.** Water levels were measured in sixteen wells in this aquifer, thirteen of which are located on Kent Island. Most wells continued to fluctuate seasonally by less than 4 feet, as in previous years. The largest fluctuation occurred at Centerville (QA De 27) where the water levels fluctuated as much as 14 feet due to regional irrigation withdrawals. Current water levels range from 16.99 ft above sea level at Kingstown (QA Be 17) to 21.68 ft below sea level in Centerville (QA De 27). Overall, water levels in the Aquia aquifer exhibit a slightly increasing trend.

**Magothy aquifer.** Water levels were measured in one well in the Magothy aquifer (Natural Resources Police Academy in Matapeake [QA Ea 27]). The most recent water level was 23.08 ft below sea level. Recent water levels in this well have shown a flat trend.

**Upper Patapsco aquifer.** Water levels were measured in three wells completed in this aquifer. Current water levels range from about 21.28 ft below sea level to about 26.81 ft below sea level; both recorded in the observation well at Kingstown (QA Be 16). Over the past year, water levels in the well at Kingstown (QA Be 16) fluctuated seasonally as much as 6 feet. Overall water levels exhibit a slightly declining trend which is most likely due to regional pumping in Anne Arundel, Queen Anne's, and Talbot counties.

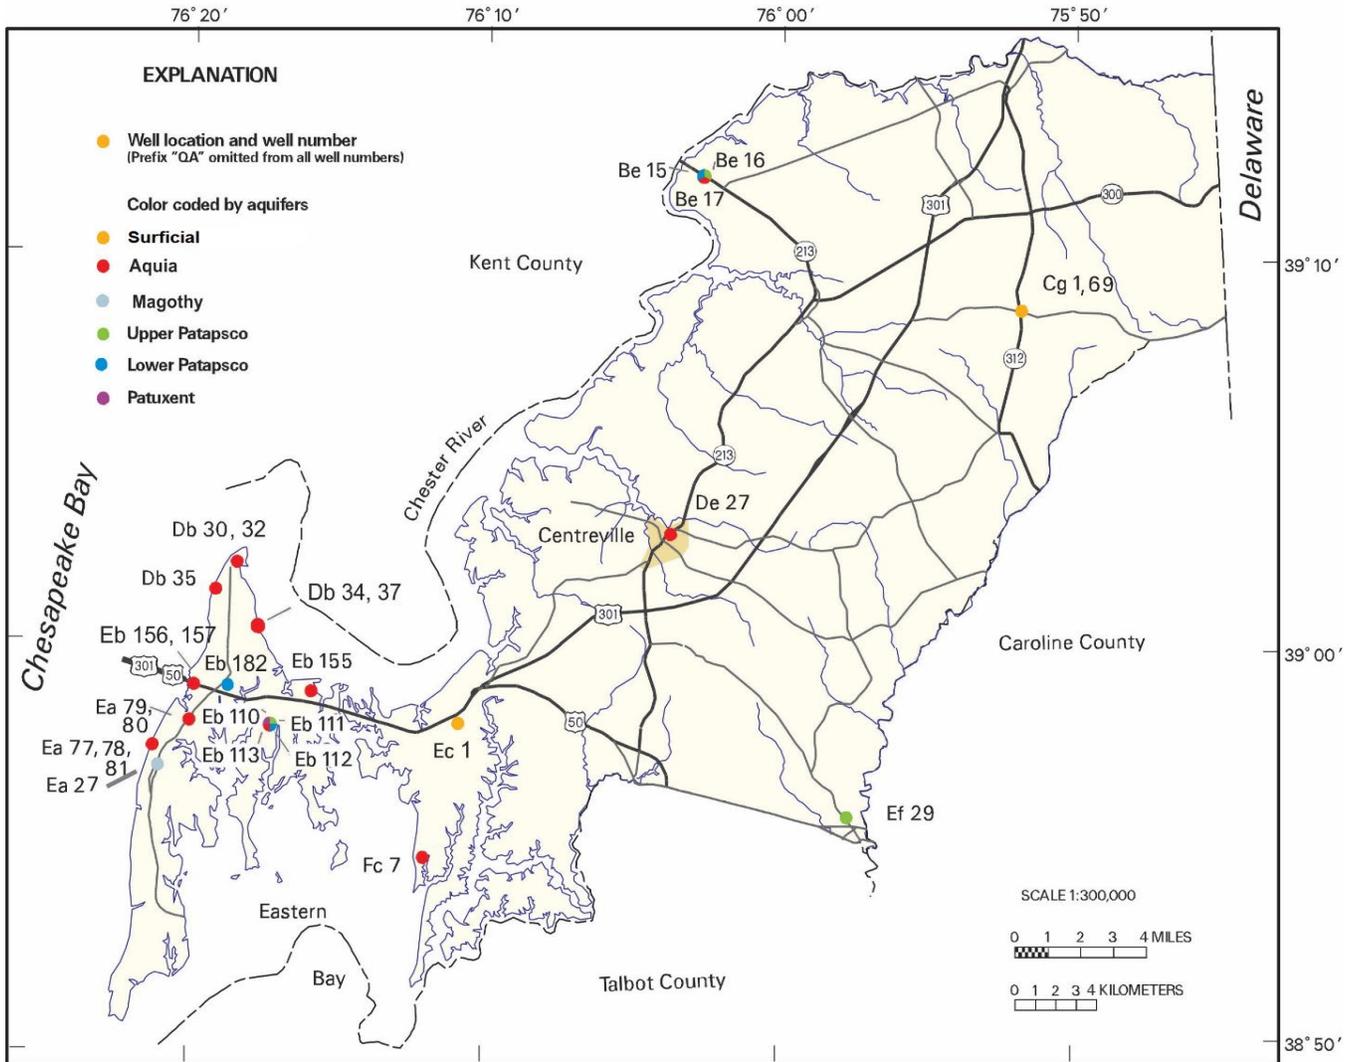

**Lower Patapsco aquifer.** Water levels were measured in three wells completed in this aquifer. Current water levels range from about 8.70 ft below sea level at Kingstown (QA Be 15) to about 53.63 ft below sea level at Stevensville (QA Eb 182). Water levels in all wells are declining. Water level in Stevensville well (QA Eb 182) is affected by local pumping and does not display a long-term trend, but two of the wells, located at Kingstown (QA Be 15) and Chester (QA Eb 112), continue to decline at approximately one foot per year.

**Patuxent aquifer.** Water levels were measured in one well in the Patuxent aquifer at Chester (QA Eb 110). The current water level is about 15.21 ft below sea level. A steep decline starting in 2012 was a result of withdrawals from the Arnold well field in Anne Arundel County. In recent years, the water level has stabilized and is showing a flatter trend.
